

Be Informed. Be Inspired. Be there

We will be here

Be Informed

Be informed as to why Northey Technologies Ltd was tagged as the "**Specialists in Gas Handling**". We develop, design, manufacture and supply dry vacuum pumps, dry and oil-free compressors, side channel blowers and lubricated sliding vane machines.

We invented the **Hook & Claw** principle in the 1930's. Two contra rotating rotors compress the gas and the hooks allow inlet and discharge through ports. The machine can be used in vacuum or compression. The advantages are the following:

- No contact between rotating parts -> NO need for lubrication
- No sealing liquid -> air or gas left clean and uncontaminated
- No wear and no consumption of oil or other liquid.

We also have the capacity to build tailor-made systems including skids, instrumentation and control for various application in different industries. Part of our portfolio are the following:

- Vent gas recovery in the onshore and offshore oil & gas industry
- Syngas processing
- Biogas compression for sewage treatment and landfill
- Gas processes, such as, argon and hydrogen

Northey has a highly experienced Service Department for all customers' servicing and repair requirements. We are able to provide service exchange machines to reduce turnaround times and offer Maintenance Contracts for regular machine servicing on a pre-arranged schedule

Be Inspired

Be Inspired, explore & invest in the various products and services of Northey Technology Ltd. With an enviable reputation gained from over 70 years of experience, we continue to deliver high quality machines that suit our customer needs and provide first class services.

Be There

Be there and discover how we can find solutions and answers to your problems relating to vacuum pumps, dry and oil rotary compressors.

Meet us at **Achema 2018**
Frankfurt AM Main
Hall 9.0 Stand A78a
on the **11th -15th of June**
from **9am – 6pm.**
